

13th THz Young Scientists MEETING

What?

The growing applications of THz science draw new researchers into the field every year.

The annual THz Young Scientists Meeting aims to provide a friendly and welcoming international platform for young scientists to exchange ideas, and learn about advances in **fundamental and applied THz research**. The meeting consists of short talks and posters, together with social networking events.

For Whom?

We are happy to invite all master's and PhD students who work on THz-related research.

You can contribute with a talk or a poster, depending on how you feel more comfortable presenting your work. If you have just started your PhD, we encourage you to participate in the meeting with a perspective poster on your new project, without the need to present results.

By Whom?

This year the THz Young Scientists Meeting is organized by the **Free University of Berlin** and the **Fritz Haber Institute of the Max Planck Society**.

When and Where?

The meeting will take place from **September 14th to September 15th, 2023**, in the facilities of the **Free University of Berlin**.

How?

To join, please create an account and submit your abstract by **July 31st, 2023**, on the following web page: **<https://indico.fhi-berlin.mpg.de/e/THzYSM2023>**

For more detailed information regarding important deadlines, updates, and relevant topics you can navigate through the web page given above.

Note: No conference fee!
