THE NEW HPC CLUSTER

# For the early birds

## **New compute cluster `q.fhi-berlin.mpg.de` is ready for testing**

At the end of last year we applied for an upgrade of the yfhix cluster. In mid-January, the last systems (with GPUs) have been delivered. In terms of usage, the system is very similar to the old one.

# The new HPC cluster

**01** **Operating system**  
The Rocks cluster system will continue to be used.

**02** **Batch system**  
The batch system gridengine will continue to be used.

**03** **Installed Software**  
Compiler, Frameworks, scientific software

**04** **Installed Hardware**  
Intel Xeon Gold 6130  
2,1G, 16C/32T

**05** **Usage**  
How to use the system

**06** **Documentation**  
Where to find documentation

# 01

Operating system

# Rocks cluster system

Welcome to the *q* cluster home page

## Cluster Information

- [Local ganglia monitoring instance](#) (if ganglia roll is installed)
- [Cluster kickstart graph](#)
- Cluster contact: [pph@lni-berlin.mpg.de](mailto:pph@lni-berlin.mpg.de)

## How to use the system

```
[root@q ~]# rocks list host partition compute-0-0
DEVICE MOUNTPOINT          START  SIZE  ID TYPE          FLAGS  FORMATFLAGS
sda1    /                        1049kB 33.6GB -- ext4          boot  -----
sda2    /var                     33.6GB 16.8GB -- ext4          -----
sda3    swap                     50.3GB 4194MB -- linux-swap(v1) -----
sda4    -----                 54.5GB 65.5GB -- -----
sda5    /state/partition1       54.5GB 65.5GB -- ext4          -----
sdb1    /state/partition2       1049kB 33.6GB -- ext4          -----
sdb2    /scratch                 33.6GB 927GB  -- ext4          -----
```

/scratch on each node (fast ssd), 192 GB Memory
