

Vendor Day

EPICS is an open source software package that enables industries to integrate and develop industrial automation control systems.

EPICS comprises a set of software tools and applications used to develop and implement distributed control systems.

The tools are designed to help integrate large numbers of diverse, controlled devices and systems into a central control system.

The EPICS community arranges collaboration meetings for developers and managers of organisations that use EPICS tools.

One of the meeting days is devoted to industry, where industry representatives are invited to attend and listen to talks about how EPICS can be used to improve production and efficiency.

Hear world-leading EPICS experts explain how you can create and expand business opportunities in the market of large-scale research facilities

Join the collaboration meeting on 2020-10-20.

The meeting will be virtual - more information can be found [here](#).
